

## Great news for “mobile service” applications

Compac will introduce a new aluminium jack soon. This model is designed for on-road servicing with a low weight of just 18 kg.

Please note that this model is a special purpose jack.

Nothing beats the features and long service life of the 2T-C for use inside workshops.

Product specification and price will be available early May.

## Delivery times .....

The order volume at Compac was at a record high in January! This is of course positive, but has unfortunately also created some rather long delivery times for most Compac products.

In order for us to make sure that our customers avoid any disappointments, then we highly recommend to schedule orders ahead if possible.

The delivery times are getting shorter again, but are expected to be higher than “normal” for some time to come.

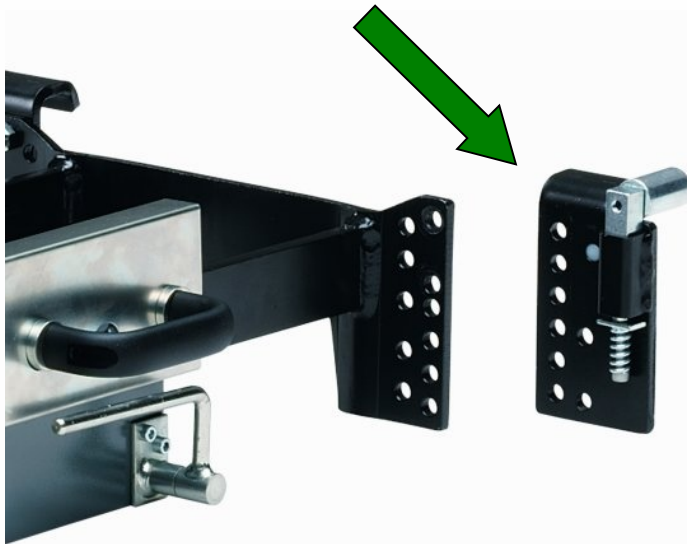

## Autopromotec

Compac will be attending the Autopromotec exhibition in Bologna, Italy again this year. The exhibition takes place from May 18th –22nd.

The stand number is Hall 21, B39. Should you plan to visit us at the exhibition then please do not hesitate to contact us for tickets.

For further information please see [www.autopromotec.it](http://www.autopromotec.it)

## Making it easier to sell Compac jacking beams

Last year Compac introduced the new generation of jacking beams. The selection of height adjustable adapters has steadily been increased. Selling the right Compac solution is now easier than ever before.

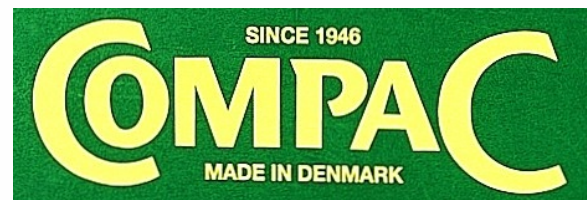

Just specify **lift brand / model** on the order and we will supply the jacking beam specifically for the application.

## Remind your customers that you are selling Compac solutions

We have a range of Compac stickers available.

These stickers may be used in shops, on vans, etc.

Please do not hesitate to specify quantity of stickers to be supplied with your next order free of charge.

Sizes available:

3 x 8 cm

4 x 13 cm

10 x 30 cm

16 x 48 cm
