

AUTOMATIC BATTERY CHARGER with microprocessor

Réf. 024519

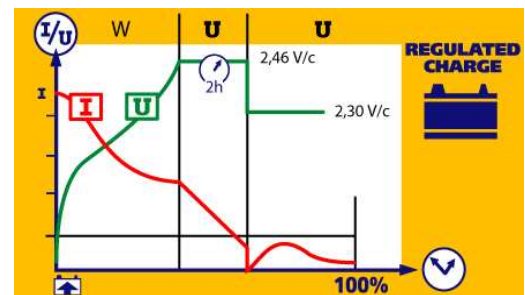

BATIUM 15-12

The **Batium** range controlled by **microprocessor** guarantees you the maximum effectiveness and security

6V 12V 35 ▶ 225 Ah (gel or liquid)

- The charge is automatic, without surveillance
- The Batium chargers with microprocessor (curve WUoU) assure the charge at 100% for all types of lead-acid battery chargers : a standard "automatic" charger (curve W2 or WU) charges in general the batteries up to 90%.
- A sophisticated charging system : after a sector current cut, the Batium restarts the charging cycle automatically where it was cut.
- **Forced Charging:** This function allows the starting even when the battery is heavily discharged (very low tension)

- Protection of the electronic on board
- Charging without disconnecting the battery for normal charging.
- Protection against the polarity reversals or the battery tension errors.
- No tension in clamps if they are not connected to the battery - avoid short circuit and sparks
- Automatic compensation for sector fluctuations.

Sulphated Batteries to regenerate

This function can be activated for batteries which started a process of sulphation and which cannot be recharged with a normal charge.

In this case, the BATIUM interlocks a specific cycle on 24h of regeneration charge.

If the battery is not damaged permanently, this function secures a correct load recovery in 9 cases on 10.
